ABOUT

I design with curiosity.
I build with purpose.

I'm Dinitha Navanith, a UI/UX designer and developer who enjoys turning complex ideas into simple, useful digital experiences.

My work sits between design and technology — exploring how thoughtful interfaces and well-built products can work together.

WHO AM I

A little about me.

A little about me.

I'm a Software Engineering undergraduate with a strong interest in UI/UX design, frontend development, and digital product experiences.

I enjoy understanding how people interact with products, finding what makes an experience confusing, and turning those problems into interfaces that feel simple and natural.

For me, design isn't only about making something look good. It's about making something easier to understand, easier to use, and meaningful to the people using it.

DESIGN

- Figma
- Wireframes
- Prototypes
- Design Systems

BUILD

- React
- HTML / CSS
- JavaScript
- Node.js

DESIGN × DEVELOPMENT

I don't see design and development as separate.

I like being involved from the first idea to the final interface.

I can think through user flows, create wireframes and prototypes, build visual systems, and then translate those ideas into functional frontend experiences.

Working across both sides helps me make better decisions — because I'm not only thinking about how a product should look, but also how it should work.

How I Work

My way of working

01 Understand
I start with the people, problem and context.

02 Explore
I explore ideas, flows and visual directions before jumping into solutions.

03 Refine
I remove unnecessary complexity and focus on what makes the experience clearer.

04 Build
I turn the final direction into a functional, responsive product.

UI/UX DESIGNER & DEVELOPER
Building thoughtful digital experiences.
